DETAILED ACTION

*** This office action is in response to filing of the Application on November 26, 2003.
Claims 1-20 are pending.

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this Examiner's Amendment was given in a telephone interview with Mr. Nelson Quintero on December 07, 2004 for amending claims 13 and 20 as to provide proper antecedent basis, since "a gate insulating layer" is previously mentioned (e.g. claim 2).

IN THE CLAIMS:

** In claim 13, line 2, change "oxide layer" to --insulating layer--.

** In claim 20, line 2, change "oxide layer" to --insulating layer--.

Allowable Subject Matter

3. Claims 1-20 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:
The references including Divakaruni (6,440,793), Mandelman (6,339,241), Seidl (2004/0029343), etc., of record, alone or in combination, do not anticipatively disclose each and every aspect of the claimed method for forming a memory cell with a single sided buried strap, or fairly make a prima facie obvious case of the claimed method, in combination with other processing claimed limitations as recited in base claims, the inclusion of removing part of the first conductive layer and part of the collar insulating layer to form a remaining first conductive layer and a remaining collar insulating layer in an opening, wherein the opening has a first sidewall and a second sidewall, and a top surface of the remaining collar insulating layer is lower than that of the remaining first conductive layer; performing an angle implantation with fluorine-

containing ions on the first sidewall of the opening; performing a thermal oxidation process to form a first oxide layer on the first sidewall and a second oxide layer on the second sidewall, wherein a thickness of the first oxide layer is greater than that of the second oxide layer; removing the second oxide layer to expose the second sidewall; and forming a second conductive layer serving as a buried strap at a bottom of the opening, wherein the second conductive layer is insulated from the first sidewall by the first oxide layer.
